GO-S

Less sick leave, more energy

The role of movement and recovery at work

For HR, prevention advisers and office managers · GO-S Business · Fré Gos

Welcome

I'm Fré, founder of GO-S. Since 2017 I've worked with companies and individuals on personal training, massage and wellbeing at work.

In this presentation you'll see why sick leave and physical complaints weigh on so many companies, and how movement and recovery at work make a real difference.

Fré · GO-S, since 2017

The problem in numbers

SICK LEAVE IN BELGIUM, 2025

1 in 10

working days lost to illness

€1,608

cost of short-term sick leave per employee per year

+94%

rise in burnout cases (2018–2024)

For a company with 100 employees, this adds up to more than €160,000, excluding indirect costs.

The underestimated part: physical complaints

55%

of all work-related health problems are musculoskeletal

46%

of employees have back complaints

74%

of jobs involve sitting for more than 25% of working time

In Belgium, the economic impact of musculoskeletal disorders is estimated at more than €5 billion a year: medical costs, sick leave and lost productivity combined.

Why the classic approach falls short

1. **No follow-up**
   A one-off action without repetition has little lasting effect.

2. **No tailoring by role**
   Someone who sits all day has different needs from someone who stands or lifts a lot.

3. **Reactive instead of preventive**
   Action is only taken once complaints are already there.

The GO-S movement plan

1

Survey & intake

What's needed, where is the need greatest, how much room is there and, above all, how much time do you have?

2

Tailored intervention

Group classes, chair massage, ergonomics or a short activation, matched to each role and your team's rhythm.

3

Follow-up & feedback

Regular moments, satisfaction and concrete feedback, so you can see what it delivers.

In practice

I've already worked with several large companies. In concrete terms:

Activation after a meeting

A short movement session for large groups, to wake the body up after a long meeting.

Ergonomics

Sessions on posture, tension and simple exercises at the desk.

Classes at the company

On-site group classes, for example a weekly movement break.

Workplace massage

Chair massages at work, for example every three months, as I do for one of my clients.

Every company picks its own rhythm: from a single activation to a fixed programme.

Sound familiar?

Are sick leave, back pain or stress an issue in your team too? Then I'd like to invite you to a free, no-obligation intake. Together we look at where your team's biggest needs are, and I put together a tailored plan.

Questions & answers

What does it cost?

It depends on the size of the team and the interventions you choose. We work it out together after the intake.

How soon will we see results?

Complaints and stress often decrease within a few weeks. A structural drop in sick leave takes several months.

Does this work for small teams too?

Absolutely. The plan scales from a small team to an entire organisation.
